We are access broadband and we would like you to know that our broadband wireless high speed internet has arrived.

We offer great broadband products and competitive prices. We hope you'll consider joining.

Fast Internet has arrived!

Home
Broadband from

£15 per month

Fast setup, fast speeds up to 2 MB/s,
fair 18 month contracts.
No BT line needed.

Business
Broadband from

£35 per month

Always on, business quality
internet, speeds up to 100 MB/s
No BT line required.

**Now available
in the West Midlands**

Wireless broadband is:

- Affordable, fast and reliable.
- Available around this area.
- Ideal for home or business customers.

Unlike others:

- We focus only on the rural West Midlands.
- Distance from the exchange is no problem.

Call us on 0800 635 3535

What is broadband?

Broadband is a fast, permanent internet connection. Broadband is 10 to 100 times faster than a dial-up internet. With broadband, you can do more in less time. No more waiting for web pages to come down slow dial up lines. With broadband you can watch TV, download music, share photos, watch movies or play games. Broadband makes the internet more compelling, enjoyable, entertaining and interactive.

What is wireless broadband?

Most broadband connections use ADSL technology, which delivers fast internet over telephone lines. While ADSL is a good technology, many people in the West Midlands live too far from the telephone exchange to be able to get ADSL.

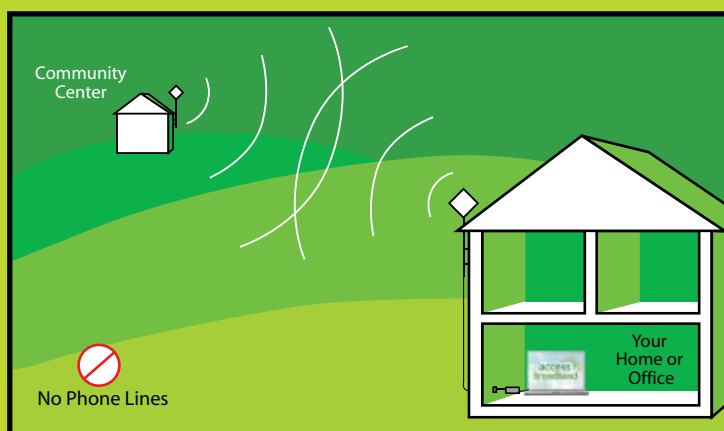

In fact wireless broadband is often called wireless ADSL. It offers a reliable, high speed, always on internet connection. We use radio technology ie radio waves rather than copper wires to connect your home. With wireless broadband you don't need a BT phone line to get broadband.

How does wireless broadband work?

This diagram shows how wireless broadband works. Access Broadband has a high speed internet connection in each of the areas we serve. We connect your home to our the internet using radio waves. This is similar to how you currently get television, radio or mobile phone reception.

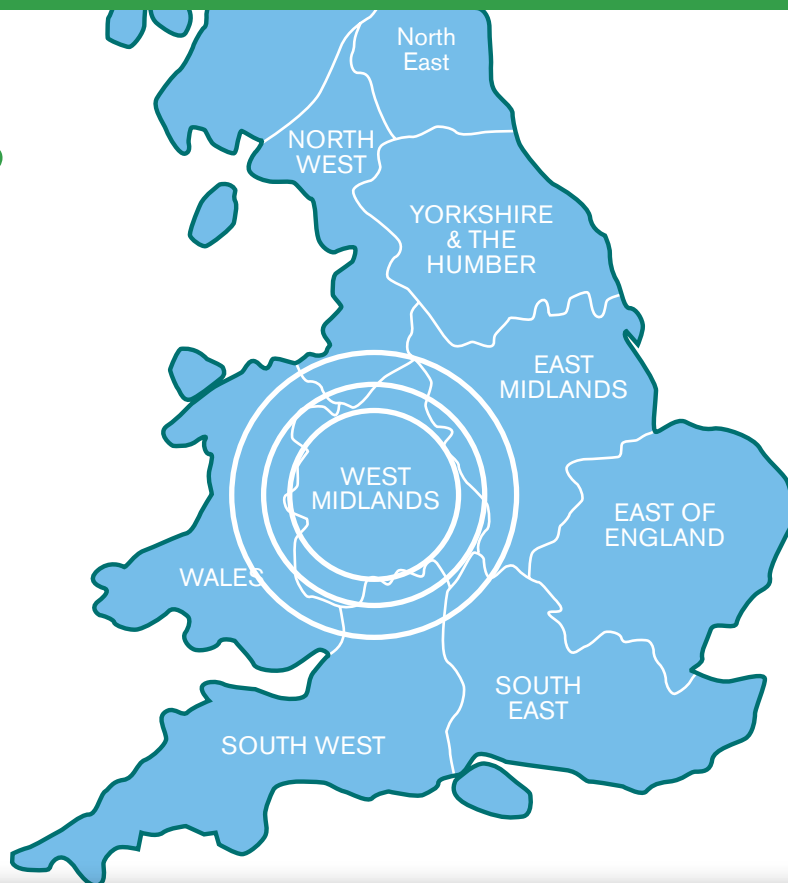

Each community has a centrally located wireless access site. Each access site has a small wireless radio transmitter, often on the roof. This transmitter beams our wireless broadband signal to near by homes and businesses a range of approximately 5 miles. Our transmission sites are often located in taller buildings, often community halls, pubs or barns.

To receive wireless broadband - we attach a small wireless receiver to your chimney or gable end. This receiver is a small low power radio unit which enables a radio connection to occur. It is over this radio connection that we deliver your broadband. The wattage or strength of the radio is considerably lower than that of a mobile phone. Please visit http://www.accessbb.co.uk/whatis/health_safety.html for additional information about Health and Safety.

Where is the service available?

Our network is live in many parts of the West Midlands. Please see below to see if our wireless broadband is available in your area. Initially we are covering post codes which previously could not get broadband in Powys, Shropshire, Cheshire, Staffordshire, Warwickshire, Hereford and Worcester.
